

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Serial No. : 09/770,767 Confirmation No.: 7766
Applicants : Avishai Keren et al.
Filed : January 25, 2001
Art Unit : 3487
Examiner : Diep, Nhon Thanh

Docket No. : 150824.04

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

REQUEST FOR FILING RECEIPT CORRECTION

Applicants respectfully request correction of the Filing Receipt mailed on June 8, 2012 to reflect the priority claim to PCT Application No. PCT/IL98/00349 filed on July 27, 1998. A copy of the Filing Receipt with the changes noted thereon is attached to this Request.

Pursuant to 35 U.S.C. 365(c), a regular national application filed under 35 U.S.C. 111(a) and 37 CFR 1.53(b) may claim benefit of the filing date of an international application which designates the United States. To obtain benefit under 35 U.S.C. 120 and 365(c) of a prior international application designating the U.S., the continuing application must:

- (A) include a specific reference to the prior international application (either in the application data sheet (37 CFR 1.76) or in the first sentence(s) of the specification),
 - (B) be copending with the prior international application, and
 - (C) have at least one inventor in common with the prior international application.
- See MPEP §§ 1895 and 1895.01.

As set forth in MPEP §1895.01, if the international application was published by the International Bureau pursuant to PCT Article 21, then a certified copy of the prior international application normally is unnecessary.

In the present application 09/770,767, the first sentence of the specification included a specific reference to prior international application PCT/IL98/00349. A copy of the page of the specification showing the specific reference is attached to this Request.

The present application 09/770,767 was filed on January 25, 2001, at which time the prior international application PCT/IL98/00349 was still pending. The prior international application PCT/IL98/00349 was filed on July 27, 1998 and designated the United States. The present application 09/770,767 was filed before the expiration of 30 months from the filing date of the prior international application PCT/IL98/00349.

The present application 09/770,767 has at least one inventor in common with the prior international application PCT/IL98/00349.

The prior international application PCT/IL98/00349 was published by the International Bureau in English as International Publication No. WO 00/07091 on February 10, 2000. Therefore, a certified copy of the prior international application PCT/IL98/00349 was unnecessary. It is noted that a copy of the international publication was submitted in an Information Disclosure Statement.

Accordingly, Applicants are entitled to the benefit under 35 U.S.C. 120 and 365(c) of the prior international application PCT/IL98/00349 filed on July 27, 1998 and respectfully request correction of the Filing Receipt to reflect the priority claim.

Respectfully submitted,

/Robert V. Racunas/
Robert V. Racunas, Reg. No. 43,027

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections**

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stoplakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage, facilitate, and accelerate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

RELATED APPLICATIONS

[01] This application claims priority to under 35 USC §120 or §365(c) of PCT application No. PCT/IL98/00349 entitled Remote Computer Access filed July 27, 1998.

BACKGROUND OF THE INVENTION

1. The Field of the Invention

[02] The present invention relates to remote operation of computer systems and in particular to remote access to a computer running an Internet browser.

2. The Relevant Technology

[03] Various methods of remotely accessing a computing server have been used in the past. One of the first methods utilized a server and terminals. Input is entered at the terminals, transmitted to the server and the results are send back over data lines to the terminals. The terminals can be "dumb" terminals, such as a VT52, with no processing power except to display the data, or they can be smart terminals, such as an IBM 3270, which can do some basic form filling without requiring intervention of the server.

[04] As computing power has grown cheaper, various other strategies have been used. In the X11 graphical networking protocol, a display server sends bitmaps to a display client and receives input events from the client. In the NeWS graphical networking protocol, a server sends short code segments to a client computer. The code segments perform display and input handling functions at the client and, when needed, send input to- and receive display data from- the server.
